The Study Materials Aimed to Help You Pass the Certification Exam

**Exam** : **E20-465**

**Title** : Content Management System  
Administration

**Vendor** : EMC

**Version** : DEMO

NO.1 You are setting up a distributed content configuration.

You need to add proximity values to your repository configuration.

How do you add proximity values?

- A. The only way is to use Documentum Administrator to modify the dm\_server\_config object.
- B. You can use Documentum Administrator to modify the dm\_server\_config object or modify the server.ini file on the Content Server host.
- C. The only way is to use Documentum Administrator to modify the server.ini file stored in the repository.
- D. You can use Documentum Administrator to modify the dm\_docbase\_config object or modify the server.ini file on the Content Server host.

**Answer:** B

NO.2 Assume that the Content Server, Application Server, and Database are adequately resourced with CPU and memory.

Which factor has the most detrimental effect on the user experience when using Webtop to browse and search for documents in the repository?

- A. Low bandwidth between the Application Server and the client
- B. High latency between the Application Server and the client
- C. High latency between the Content Server and the Application Server
- D. Low memory on the client

**Answer:** C

NO.3 You have selected to create an initial XML store as part of your new Content Server installation. What is one of the ways to ensure that the new XML content files your users create are stored in that location by default?

- A. Any file with the XML format will be automatically assigned to the XML store without additional configuration.
- B. Create a new migration policy for the desired XML content.
- C. Create a new assignment policy for the desired XML content.
- D. Create a new custom plugin to handle content operations in the XML store.

**Answer:** C

NO.4 For distributed environments, which functionality is provided by the Documentum Messaging Services (DMS) Server?

- A. Synchronous Write, BOCS in Pull Mode
- B. Content pre-caching, Asynchronous Write
- C. Object Replication, Asynchronous Write
- D. Content pre-caching, BOCS in Push Mode

**Answer:** B

NO.5 During the installation for Webtop, the installer prompts that the "Content Transfer Folder" be specified. What is the purpose of this folder?

- A. It is the directory where checked-out files will be stored on the filesystem of the client

workstation.

B. It is the directory where the XML, .jar, and .properties files used by Unified Content Facilities (UCF) will be downloaded to client workstations.

C. It is the directory where temporary files will be stored on the application server filesystem.

D. It is the directory where the Unified Content Facilities (UCF) log files will be written during tracing operations.

**Answer:** C

NO.6 Which DQL hint could be used to help to optimize a complex query where the join seems to be the major bottleneck?

A. INDEX

B. RETURN\_TOP

C. FORCE ORDER

D. OPTIMIZE\_TOP

**Answer:** C

NO.7 Which statement is true about Optical Character Recognition (OCR) and Index Server?

A. OCR is a separate Index Server plug-in downloadable from Documentum and not part of the default Index Server installation.

B. The OCR process occurs within the DocProcessor as it reads DFTXML created by the Index Agent.

C. There is no OCR process within the Index Server.

D. The OCR process occurs when the Index Agent creates the DFTXML.

**Answer:** C

NO.8 Which administrative method is used to execute a dm\_method on demand?

A. APPLY

B. EXECUTE\_METHOD

C. EXEC\_METHOD

D. DO\_METHOD

**Answer:** D

NO.9 What is required for authenticating against a Windows system?

A. a Windows account only

B. a Windows account and a Documentum account

C. a Documentum account only

D. a Documentum account and an administrator role

**Answer:** B

NO.10 Where can an object replication job be created?

A. in the source repository only

B. in the target repository only

C. in the source repository or the target repository

D. in any repository

**Answer:** D

NO.11 Users complain that it takes several seconds to get the result for DQL queries on dm\_document searching for keywords. Your database administrator says that the disk I/O rate on the database machine is consistently high and no other change can be made to the database hardware. The database and Content Server run on separate hosts.

How could you solve this problem on the Content Server?

- A. add more or faster CPUs on the Content Server machine
- B. create a selective database index against the dmr\_content\_s table
- C. create a database index on the keywords column of the dm\_sysobject\_r table
- D. buy faster disks for storing the Documentum content

**Answer:** C

NO.12 What are the necessary steps to enable parallel content migration?

- A. Configure the maximum number of threads to use on the dm\_docbase\_config object instance
- B. Activate the Content Storage Services license only
- C. Activate the Content Storage Services license and then configure the number of threads to use on the server config object
- D. Activate the Retention Policy Services license and then configure the maximum number of threads to use on the server config object

**Answer:** C
